

Court recordings on demand, now with word and case search

Listen to court recordings and search for and follow proceedings on screen with word and case search. Court.fm™ allows you to listen anywhere, any time.

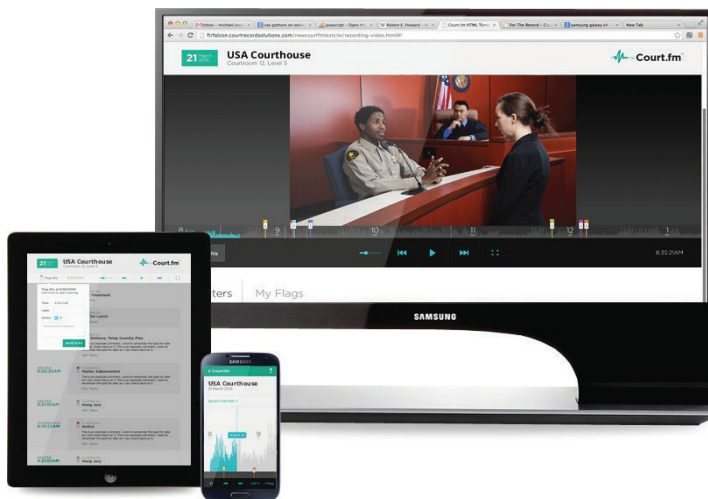

With a simple two-step ordering process, parties will be given secure access to courtroom recordings via the internet. View case details, add flags and order transcripts too. It is the modern, more flexible way to access the court record.

Benefits

- Court.fm™ solves the problem of needing to allow users to access a central repository of original recordings. Instead, it delivers a content-driven search and retrieve experience that reduces IT effort for provisioning content, and allows IT to focus on the larger or more important things.
- Judges and clerks can listen to the record on their own schedule. With Court.fm™, content is always available on demand.
- The Court.fm™ interface is designed for playback and analysis of the recording and offers detailed note-making tools to the user.
- Court.fm™ ensures secure access and full user action logging with the ability for courts to recover fees through integrated online secure credit card processing.
- Encrypted content streaming removes the need to download files for playback and reduces uncontrolled court recordings in circulation (internally and externally).

Key Features

- Near-live audio and video streaming
- Easy-to-use interface
- Full history of user playback and access for administrators
- Annotations, event flagging and commenting
- Integrated clerk approval workflow and secure online ordering with credit card payment for granting external party recording access
- Content-driven search and retrieval

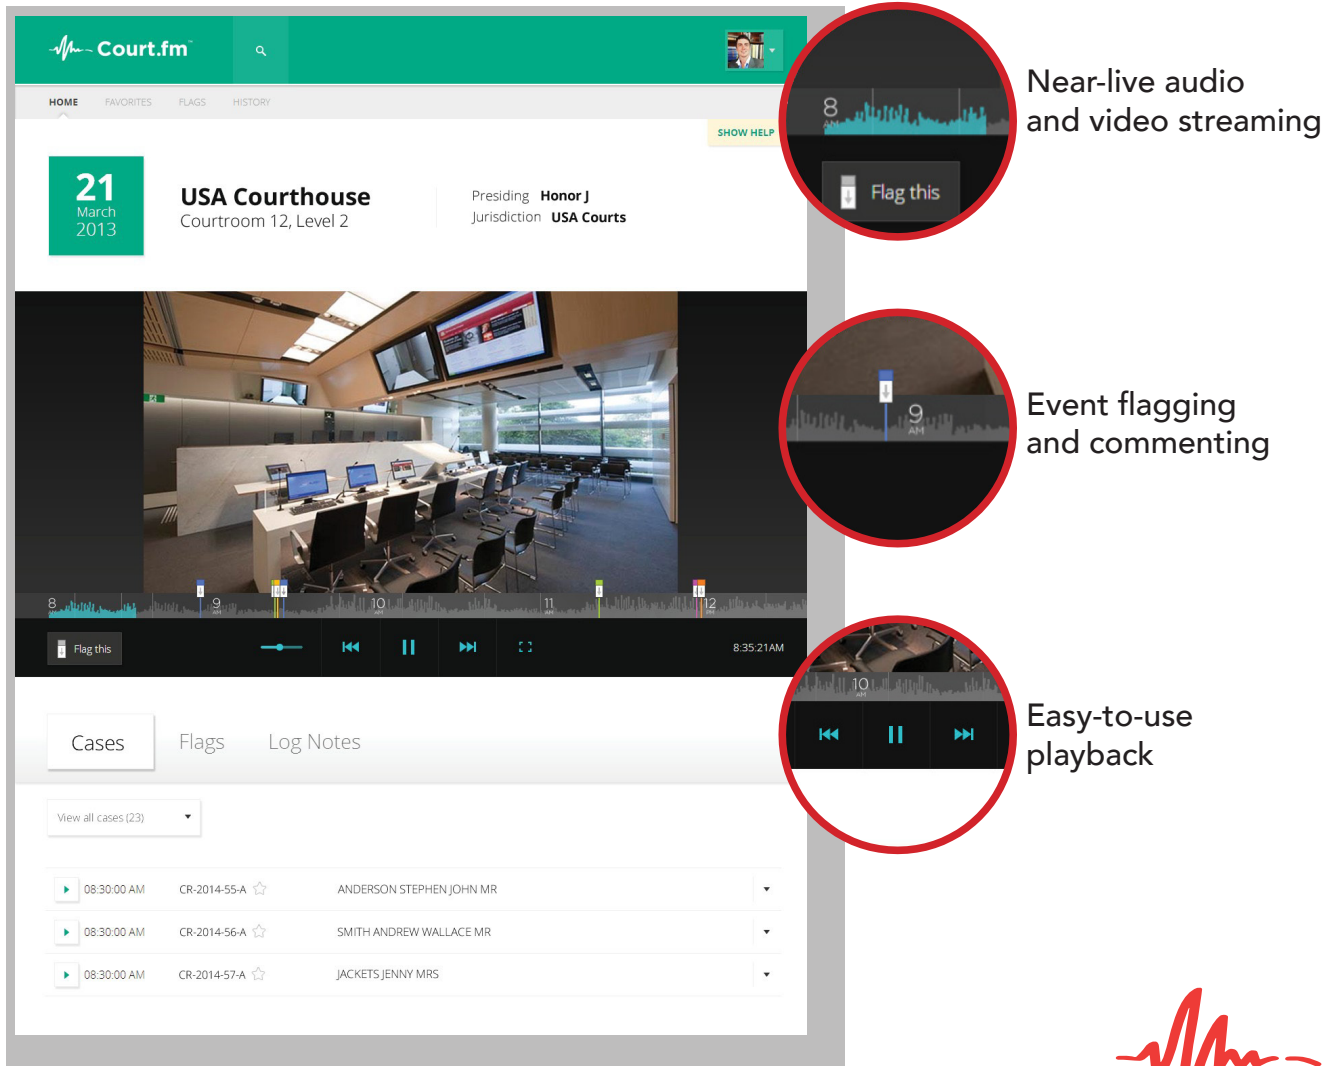

For **The Record**

Works with

- FTR Gold™, the industry standard in multi-channel digital audio/video court recording.
- FTR Gold Server™ lets your organization move towards a centralized recording model, effectively leveraging server hardware technology to capture audio feeds from up to 16 individual rooms on a single server.
- LiveCopy™ delivers copies of your recordings - as they are still being made - to anywhere on your network for live transcription. It even supports live transfers via the internet to external service providers.

Minimum System Requirements

Works on most computers and devices with access to the internet and modern internet browsers (Chrome, FireFox, Internet Explorer, Safari).

The screenshot displays the Court.fm web interface. At the top, there is a navigation bar with 'HOME', 'FAVORITES', 'FLAGS', and 'HISTORY'. Below this, a date widget shows '21 March 2013'. The main content area features a video player showing a courtroom scene. Three callouts are overlaid on the interface:

- Near-live audio and video streaming:** A circular callout pointing to the top right of the video player, showing a waveform and a 'Flag this' button.
- Event flagging and commenting:** A circular callout pointing to a vertical flag icon on the video player's timeline.
- Easy-to-use playback:** A circular callout pointing to the video player's control bar, which includes play/pause, stop, and next buttons.

Below the video player, there are tabs for 'Cases', 'Flags', and 'Log Notes'. A dropdown menu shows 'View all cases (23)'. A table lists three cases:

Time	Case ID	Case Name
08:30:00 AM	CR-2014-55-A	ANDERSON STEPHEN JOHN MR
08:30:00 AM	CR-2014-56-A	SMITH ANDREW WALLACE MR
08:30:00 AM	CR-2014-57-A	JACKETS JENNY MRS
