

## Fully centralized and network-driven digital recording solution.

FTR Gold Server™ the product of choice for digital court recording, is now available as a server-based model aimed at better leveraging the scale of your operation.

The fully centralized digital recording and monitoring intelligence delivered by FTR Gold Server™ offers true value by enabling secure and reliable high quality performance while also delivering operational cost efficiencies.

FTR Gold Server™ streamlines your courtroom operations by delivering a highly efficient, fully centralized and network-driven digital recording solution.

## Key Features

- Centralized recording of up to 16 courtrooms on one physical server
- Up to 8 audio channels per courtroom
- Digital audio capture interface support
- Analog audio capture interface support
- Integrates with FTR Monitor™ for remote control and monitoring of recordings
- Integrates with FTR Manager™ to achieve real-time sealing, usage reports and warehouse replication

For **The Record**

## Benefits

- Remotely capture up to 16 x 8 channel courtrooms per server with fully centralized, network-driven digital recording.
- Integrate with FTR Monitor™ to create a truly centralized operation with live confidence monitoring and remote start, stop and playback of multiple courtrooms.
- Work at scale with centralized recording and monitoring to make the most of your resources and enable greater efficiencies.
- Integrate with FTR Manager™ to supercharge your FTR recording archival through real-time sealing and replication. Leverage indexing and search technologies to provide instant content file location and playback.

## Operating System Capability

- Windows® 7 and above.
- Windows® Server 2008 Standard 64-bit and above.

## Minimum System Requirements

- CPU: Intel® Core™ i7 Processor or equivalent.
- Memory: 8GB.
- Display: 1024x768.
- Windows compatible stereo sound card.
- Gigabit network access (for archiving or long-term storage).
- FTR Reporter Server and Windows compatible sound card.
