

 For **The Record**

*Digital* deposition  
Fast, affordable and reliable

62 Countries | 50 US States | 30,000 Installations

## For when it matters *most*

For The Record (FTR) is a global leader in digital recording solutions – trusted to capture evidence, testimonies and the court record for more than 25+ years.

With more than 30,000 installations across 62 countries, For The Record provides digital recording confidence when it matters most: in courts, depositions and law enforcement.

Being dedicated to the justice system, our purpose-built solutions reliably capture and securely store the digital record, and support court reporters to deliver high quality transcripts.

## Discover so much *more*

With For The Record, you will discover that preparations for trial can be a whole lot easier with a robust recording solution to capture testimony and conduct examinations.

Our portable and fixed, on-location options - either fully supported under a support contract or managed remotely - offer seamless simplicity pre-trial and flexibility to deliver what's needed for different cases and clients.

The integrated solution combines best-of-breed hardware and the industry-leading FTR Gold software with its high fidelity audio (up to eight channels) and HD video recording, easy annotation and advanced storage. With the FTR system, there is no more confusion over who owns the recording and where it is. The recording is captured digitally and owned by the party(ies) paying for the recording. The recording is available and retrievable to you through your FTR account.

Housed in a compact, convenient mobile kit, the technology can be easily taken and set-up wherever required, or established as a permanent recording facility in your law firm.

For additional confidence and peace-of-mind, the portable kits are sold with on-line and telephone technical support while the permanent, fixed solutions can even be remotely managed by For The Record.

| Annual technical support contract available  | Backed by an annual technical support contract  |
|  | Available to be remotely managed by FTR   |

## Do more with *audio*

For The Record also provides 'audio with words': a speech-to-text tool that uses artificial intelligence to instantly machine-generate raw text on screen as audio is played.\*

\* Please note: This is not a replacement for a certified transcript or official record as in most cases its accuracy will be lower than a human produced transcript although quality levels will continue to improve with the fast paced ongoing development of speech to text engines and machine learning.

Recording confidence in one **compact, convenient** solution
