For **The Record**™

Record with the *confidence* and ease of **FTR Gold**™

62 Countries | 50 US States | 30,000 Installations

It is *easier* than ever to capture and manage court recordings.

When you are making decisions that impact someone's livelihood or freedom, you have to be certain. Capture and manage the court record using the latest digital technology with the new FTR Gold™.

The latest version of FTR Gold™ builds on its proven track record with enhanced ease, robust reliability and powerful functionality built from intensive development and real world testing.

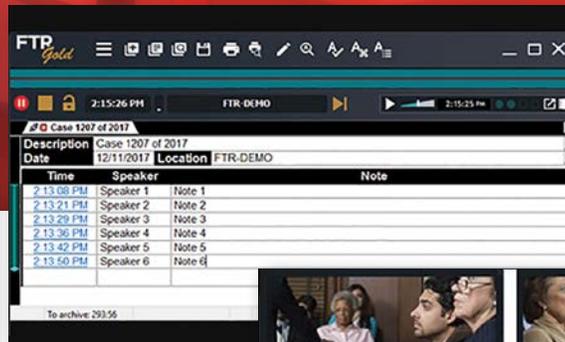

Classic design.

Do *more* with digital

Software that looks great, works well and installs easily – with no exceptions. Expect that and more from FTR Gold™. With powerful improvements and new workflow features, including a makeover to the user interface and an easy installer and updater, FTR Gold™ sets a new bar for court recording.

Record	Annotate	Manage and store	Play back
Record up to eight channels of high fidelity audio per PC and up to four channels of 1080p HD video, and hear how a recording will actually sound as it is being made.	Take the guesswork out of recalling and locating critical moments for playback.	Ensure the record is appropriately managed and stored by implementing practical safeguards your whole operation can use.	Have complete control during play back of an audio or video recording.
Automatic alerts for loss of signal and low audio levels also provide added recording confidence.	Add searchable information such as participants/appearances, spellings and key terminology.	Save to optical devices with ease and have the flexibility to choose the resolution while formatting a TRM file to Windows Media Format to manage the file footprint.	You can isolate individual audio channels, adjust microphone volumes and speech speed, and easily differentiate who is speaking.
Complete department specific recording while retaining your existing FTR directory structure.	While you can also tag a case number to easily manage the reformatting and distribution of audio for that particular hearing.	Seal and unseal sensitive recordings (on the fly or after the fact), convert file formats, and apply access controls.	Identify speakers accurately during annotation with improved contrast between channels, a longer time period, and enhanced sensitivity to quieter signals.
Server based recording is also supported with FTR Gold™ Server for recording multiple courtrooms on one server.	Making notes is simple with integrated and standalone log notes, including automated timestamps.	For the highest level of security, digital signatures can also be added to recordings in FTR's cloud-based storage.	See audio and video simultaneously, and re-open files where you left off.
	For ultimate efficiency, use hot key functionality that is customizable to an individual's and commonly referenced events, and benefit from automated replication and backup of recorded audio and log notes.	FTR Warehouse centrally indexes all FTR content to provide immediate user access. It also provides centralized management of associated recorders and content, including scheduled or manual recording control, automatic content conversion, and file replication.	Supports USB foot pedals for additional ease of use.

What's *new*

Easier installation and use

Enterprise software needs to meet the same usability standards as consumer software. FTR Gold™ has had a makeover with an updated user interface (with the option to use the classic design), and a new installer to silently install and deploy the FTR Gold™ Recording Suite which will uninstall previous versions of FTR Reporter™ and the FTR Gold™ Recording Suite*. Upgrades are also supported across FTR Player™, and FTR Gold™ Annotation and FTR Gold™ Monitoring Suites.

Optimal performance

We understand that you need the utmost confidence in your recording system when it matters most. With new improvements and features, FTR Gold™ provides ongoing assurance and peace-of-mind.

Archiving and storage

In the age of big data, storage is becoming more complex. FTR Gold™ assists courts manage and provide access to recordings with configurable save destinations to suit multi-jurisdictions and archiving in line with relevant retention policies.

Recording quality

The clear and complete capture of the court record is key to the court reporting process. That's why FTR Gold™ comes with fast recording start-up and automatic detection and alerts for loss of signal and low audio levels based on ambient noise levels.

Remote recordings

We live in a decentralized world. In this day and age, the person controlling the recording no longer needs to be in the same physical location as the courtroom. Software needs to be fully flexible to support this model. FTR Gold™ provides fully featured remote control, so that a single PC on a network can be used to monitor and control one or more recording environments. Remote monitors can complete jurisdiction specific recordings without changing the existing FTR recording folder structure.

Improved integration

It is increasingly unacceptable for information to live in data silos. Users want collated data, at their fingertips. FTR Gold™ integrates with case management systems and has increased compatibility with a wider range of networked and USB audio interfaces, and IP cameras.
