

Efficient note taking and review of the digital record.

FTR Gold™ Annotation Suite is the most sophisticated solution for efficient review and playback of the digital record. Take notes and link them to a precise place in the recording, and return to the relevant place simply by clicking the time stamp.

Take charge of the record with independent control over audio and video channels, and playback speed. You also have access to advanced features that allow you to manage the record by exporting to other file formats, saving FTR recordings to DVD and marking segments as confidential or "sealed".

Includes

- FTR Log Notes™
- FTR Player™
- FTR Manager™

Benefits

- Create meaningful, searchable metadata for digital recordings.
- Have on hand information critical to an accurate transcript - such as appearances, spellings and key terminology - and present it clearly in a timeline of events.
- Create fully featured, customizable (individual or enterprise) hot keys for your most commonly referenced events and replace monotony with efficiency in annotation.
- Save time searching for events with one click playback from timestamps. Timestamps jump you to the exact point in the associated recording where the note was taken.
- Tag a case number to easily manage the reformatting and distribution of audio for that particular hearing.
- Identify speakers accurately with improved contrast between channels, more time, and enhanced sensitivity to quieter signals.
- See audio and video simultaneously, and re-open files from where you left off.

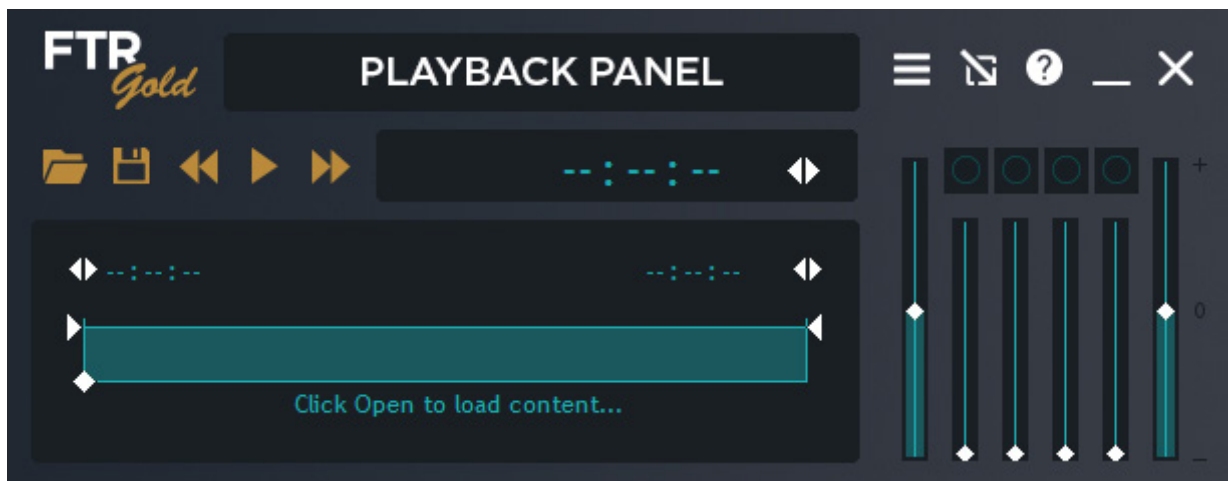

Description	Case 123 of 2019	
Date	03-Sep-19	Location Supreme Court 23
Time	Speaker	Note
9:19:27 AM	Court	Thank you. Yes Ms
9:20:56 AM	Ms Tan	If it please
9:21:11 AM	Court	Yes Mr Green
